CAN YOU TELL ME HOW MANY FRACTURES DID PATIENT
HAVE

HI

Good afternoon, Doctor! I've reviewed the patient's history and noticed that there are multiple results indicating a high probability of fracture. Specifically: * The most recent two results (dated 2026-05-06 12:37:58.136551 and 2026-05-06 12:37:43.479466) have a probability of fracture at 0.7405311 and 0.9693312, respectively. * These results are consistent with the presence of a fracture. The earlier results indicating normal findings (dated 2026-05-06 12:37:16.572299, 12:37:06.145620, and 12:36:58.783795) have much lower probabilities of fracture, ranging from 0.0019651628 to 0.12270904. Based on these findings, it appears that the patient is likely experiencing a fracture, with the most recent results suggesting a high degree of certainty. I recommend further evaluation and examination to confirm the diagnosis and develop an appropriate treatment plan. Please let me know if you have any questions or would like me to clarify any aspect of the patient's history.
